

Data verification log file

Hospital name: Hypothetical Hospital

Country name: Hypothetical Country

Data from:

02 Jan 2016 to 10 Jan 2017

This report is for users to review variable names and data values used by microbiology_data file and hospital_admission_data file saved within the same folder as the application file (AMASS.bat). This report can be used to assist users while completing the data dictionaries for both data files.

Generated on: 06 Dec 2023 11:03:45

Software version: 3.0 (BETA) Build 3022 on 27 Nov 2023

Data verification log file

Please review the following information carefully before interpreting the AMR surveillance report generated by the AMASS application.

The microbiology_data file (stored in the same folder as the application file) had:

50404 records with collection dates ranging from **02 Jan 2016** to **10 Jan 2017**

Collection date are in **others** format. Example : **21oct2016**, **19jul2016**, **22sep2016**

Microbiology data's hospital number are from **1** to **9** charecter lengths. The following are most common lengths.

6 charecters long : **91.84% (46290/50404)**

3 charecters long : **3.25% (1639/50404)**

4 charecters long : **2.62% (1321/50404)**

Missing data.

0 records are missing or unknown format of collection date.

0 records are missing specimen type.

0 records are missing culture result.

The hospital_admission_data file (stored in the same folder as the application file) had:

247260 records with admission dates ranging from **01 Jan 2016** to **31 Dec 2016**

Admission date are in **others** format. Example : **09oct2016, 21dec2016, 08jul2016**

Discharge date are in **others** format. Example : **27apr2016, 19nov2016, 04nov2016**

hospital admission data's hospital number are from **1** to **7** character lengths. The following are most common lengths.

7 characters long : **80.0% (197808/247260)**

6 characters long : **18.72% (46287/247260)**

3 characters long : **0.66% (1634/247260)**

Missing data.

0 records are missing or unknown format of admission date.

0 records are missing or unknown format of discharge date.

0 records are missing outcome.

10 records are missing age.

0 records are missing gender.

The merged data set between microbiology data and hospital admission data had:

Microbiology data records unable to merged with hospital admission data records.

934 records are unable to merge due to no hospital number found in hospital admission data.

14 records are unable to merge due to have hospital number found in hospital admission data but collection date not in admission period.

Merged data.

49456 records are merged (All specimen type).

14935 records are merged (Only blood specimen).

14071 records are merged (Only BSI specimen).

Table S1A: List of data values of the variable recorded for "organism" in your microbiology data file, which are mainly used for the main report

Data values of variable "organism" in AMASS, which are mainly used for the main report	Data values of variable recorded for "organism" in your microbiology data file	Number of observations
