

Data verification log file

Hospital name: Hypothetical Hospital

Country name: Hypothetical Country

Data from:

02 Jan 2016 to 10 Jan 2017

This report is for users to review variable names and data values used by microbiology_data file and hospital_admission_data file saved within the same folder as the application file (AMASS.bat). This report can be used to assist users while completing the data dictionaries for both data files.

Generated on: 16 Nov 2023 13:33:45

Software version: 3.0 (BETA) Build 3019 on 16 Nov 2023

Data verification log file

Please review the following information carefully before interpreting the AMR surveillance report generated by the AMASS application.

The microbiology_data file (stored in the same folder as the application file) had:

50404 records with collection dates ranging from **02 Jan 2016** to **10 Jan 2017**

Collection date are in **others** format. Example : **22sep2016, 09aug2016, 17sep2016**

Microbiology data's hospital number are from **1** to **9** charecter lengths. The following are most common lengths.

6 charecters long : **91.84% (46290/50404)**

3 charecters long : **3.25% (1639/50404)**

4 charecters long : **2.62% (1321/50404)**

Missing data.

0 records are missing or unknown format of collection date.

0 records are missing specimen type.

0 records are missing culture result.

No hospital_admission_data file found in the same folder as the application file. Thus, no hospital admission data set information.

No hospital_admission_data file found in the same folder as the application file. Thus, no merged data set information.

Table S1A: List of data values of the variable recorded for "organism" in your microbiology data file, which are mainly used for the main report

Data values of variable "organism" in AMASS, which are mainly used for the main report	Data values of variable recorded for "organism" in your microbiology data file	Number of observations
